Summary — Results-driven Software Engineer with over 3 years of experience in software development and testing, specializing in building robust CI/CD frameworks and delivering high-quality, reliable solutions. Proficient in Go, C/C++, and scripting languages, with a strong background in network protocols (TCP/IP, SMTP) and Linux environments.

Experience

Barracuda Networks

Sept 2022 – Present

Software Engineer

- Developed & Enhanced CI/CD frameworks from scratch for firmware development, ensuring seamless deployment and full development lifecycle support.
- Contributed to significant code rewrites in Go and developed new features for Email Security Gateway firmware, enhancing security features and product performance.
- Identified and resolved critical vulnerabilities within the codebase, significantly improving overall security posture.
- Addressed complex customer escalations and designed custom software solutions to meet specific client needs.
- Configured monitoring tools to track system performance and troubleshoot issues proactively
- Automated routine tasks using scripts to reduce manual effort and increase productivity
- Played a key role in the major platform migration of Email Security Hardware Appliance from Platform-2 to Platform-5 across 7 variants, ensuring a smooth transition.
- Restored development environments for various products, facilitating improved development and testing processes.
- Analyzed and resolved issues across transport and data link layers of network protocols (TCP/IP, SMTP) to address customer challenges and improve system reliability.
- Effectively handled critical incidents, minimizing impact and ensuring business continuity.
- Represented Barracuda Networks at the inauguration of the Cybersecurity Centre of Excellence at Basaveshwar Engineering College, fostering student engagement with cybersecurity careers, industry professionals, and emerging technologies.
- Runners-up in company-wide Hackathon

Projects

Centralized Appliance Management Platform:

- Developed a comprehensive platform for integrating and managing various Barracuda appliance products. This platform enabled centralized configuration changes (additions/deletions), provided real-time product health and system details, and integrated an AI-powered chatbot for log analysis to identify and analyze processing failures, offering intelligent insights.

Cloud Health Monitoring Service:

- Developed a service to analyze company cloud resource health and a platform for managing and monitoring all utilized cloud resources.

Social Distance Device for Theaters:

- Developed a device to alarm individuals about social distancing measures in theaters without human intervention.

OXY-TREAT:

- Designed a system for refining environmental air to provide pure oxygen based on customer requirements for public areas.

Education

B.E. - Electronics Communications Engineering — BEC, Bagalkot • Karnataka August 2022

Skills

Networking TCP/IP, SMTP

OS Debian, Ubuntu, CentOS

Languages GO (Golang), Python, Bash, Perl, C, C++

Tools CI/CD, GitHub Co-Pilot

Testing Python-Selenium, Pytest, Manual
